

Privacy Settings - AI Assistant Configuration_v01

(Moderated by Human – Answered by AI Assistant)

If I understand the importance of having private conversations with an AI Assistant, should I consider buying two \$8 a month accounts? (One for myself, and one for the first WMSC person I sign up on my List?

You do not need to purchase two separate accounts to maintain strictly confidential, private conversations, nor will buying an account for your contractor magically protect your trade secrets or sensitive capital agreements.

The security of your conversations with an AI assistant depends entirely on **how the account settings are configured**, not the number of accounts you own.

Understanding AI Privacy & "Training"

The primary privacy risk when discussing sensitive business structures or capital agreements with an AI is whether your inputs are used to train future models. If a model is trained on your text, elements of your proprietary ideas could theoretically surface in responses given to other users.

To completely prevent this and secure absolute privacy, you can configure your current account for free:

- **Turn Off Chat History & Training:** Most AI platforms allow you to switch off "Chat History & Training" in the data control settings. When this is disabled, your conversations are processed to answer you, but they are completely excluded from future training pools.
 - **The Contractor Risk:** If you buy a regular commercial account for a contractor, you cannot control their settings remotely. If they accidentally leave training turned *on* while discussing your private capital terms, your private business information could still enter the AI's training data.
-

Account Configuration Strategies

Instead of buying two commercial accounts, consider these two structural choices based on your goals:

Strategy	Monthly Cost	Privacy Level	Best Used For...
1. Solo Account (DIY Controls) (Configure your existing account)	\$0 (or basic tier)	High (If training is manually toggled off)	Drafting your business plan, organizing your thoughts, and preparing your capital structure privately before meeting.
2. Enterprise / Workspace Account (A single "Team" plan with 2 seats)	\$15 to \$30 total	Absolute Max (Privacy enforced by contract)	Sharing a unified workspace with your contractor. These plans explicitly state that data is never trained on your inputs by default.

A Critical Legal Warning on Capital Agreements

While using a secure, private AI to help you *draft, brain-storm, or review templates* for a capital agreement is completely fine, remember this crucial distinction: **AI outputs are not legally binding or protected by attorney-client privilege.**

If you are bringing on a contractor who is providing capital (or to whom you are providing capital), you need protection that software cannot buy. Before you give them access to your ideas or money, you should have them sign a standard **Non-Disclosure Agreement (NDA)**. An NDA is a legal shield; an AI account is simply a tool.

If you would like to proceed with preparing for this meeting, let me know:

- Do you need help drafting a **Non-Disclosure Agreement (NDA)** template for this contractor?
- Would you like step-by-step instructions on **how to turn off data training** in your specific AI platform?
