

Turn Off or Disable AI Training on individual AI Assistants_v01

I am totally confused. I DO NOT want to have my google password the exact same thing as my firefox password. Is this now possible?

Yes, absolutely. You do not need to use the same password for both accounts, nor do you need your Google and Firefox credentials to match.

The account you use for Google services (Gmail, Google Drive, YouTube) and the account you use for Firefox Sync/Mozilla are two completely separate systems owned by two different companies.

How to Keep Them Separate

1. Your Passwords Are Independent

- Change your Google Account password via myaccount.google.com.
- Change your Firefox Account password via **Firefox Settings > Account**.
- Neither company knows what your password is on the other's platform. You can make them completely different from each other.

2. If You Are Using Built-in Password Managers

- **Firefox Password Manager:** Firefox has its own password manager that syncs passwords only to your Mozilla account.
RandomKeygen
- **Google Password Manager:** Google stores passwords in your Google account.
RandomKeygen
- They do not automatically sync passwords back and forth unless you manually import/export them.

3. Best Practice

- It is safer to use a different, complex password for **every** account you own.
- If you want a seamless experience across multiple browsers (like using both Firefox and Chrome), consider a dedicated password manager like Bitwarden, 1Password, or Dashlane instead of relying on browser-saved passwords.

Ok, well where should I start? I have a new Google Workspace account, and I want to use that even if I am on firefox. how do I accomplish that feat?

Using Google Workspace inside Firefox works smoothly—Firefox is fully supported by Google Workspace.

Here is how to set it up step-by-step:

1. Log into Your Workspace Account in Firefox

1. Open **Firefox**.
2. Go to workspace.google.com (or directly to mail.google.com).
3. Click **Sign In** and enter your **Google Workspace email address** (e.g., `you@yourdomain.com`) and your Workspace password.
4. If prompted, complete your initial setup (accept terms, set up 2-Factor Authentication if required).

2. Bookmark Your Core Apps

Because Firefox doesn't have built-in "Chrome profile" switching, the easiest way to access your Workspace daily is through Firefox bookmarks or pinned tabs:

- **Gmail:** `mail.google.com`
- **Google Drive:** `drive.google.com`
- **Google Calendar:** `calendar.google.com`
- **Admin Console** (*if you're the administrator*): `admin.google.com`

Pro Tip: Right-click the open tab in Firefox and select **Pin Tab**. This shrinks the tab to an icon on the far left so your Workspace apps stay open continuously.

3. Separation Best Practice: Use "Firefox Multi-Account Containers" (*Optional*)

If you also have a **personal Gmail account** and want to use both in Firefox without logging out of one to access the other:

1. Install the official **Firefox Multi-Account Containers** extension from the Firefox Add-ons store.
2. Create a container called **"Work"**.
3. Open a tab inside the "Work" container and log into your Workspace account there.

This creates a virtual wall so your personal Google account and your Google Workspace account remain completely isolated inside the same browser window.

4. Save Your Credentials Safely

When Firefox asks if you want to save your password for `google.com`:

- You can safely click **Save**.
- Firefox will store this password inside its own **Firefox Password Manager** (under **Settings > Passwords**), completely independent of your Google Account passwords.

OK, I will copy and bookmark this chat and fix it later. In the meantime, can you help me stitch the AI learning toggle to off?

Depending on whether you mean **Google Workspace** (stopping Google from using your emails/docs for AI training) or **Gemini Activity** (stopping standalone AI chats from saving), here is how to turn them off step-by-step:

Option 1: Turn Off AI "Smart Features" in Google Workspace (Gmail / Drive)

By default, Google uses "Smart Features" to analyze your Workspace data for auto-suggestions and features. To opt out:

DeleteMe

1. Open **Gmail** in Firefox.
DeleteMe
2. Click the **Gear icon (Settings)** in the top right corner and click **See all settings**.
DeleteMe
3. Scroll down to **Smart features and personalization**.
DeleteMe
4. **Uncheck** the box next to *Smart features and personalization*.
DeleteMe
5. Next, click **Manage Workspace smart feature settings** (right next to it) and untoggle both options.
DeleteMe
6. Click **Save Changes / Reload**.
DeleteMe

Option 2: Turn Off Gemini / AI Activity & Model Training

If you use Google Gemini or Google AI tools directly and don't want your prompt history used for AI training:

DeleteMe

1. Go to myactivity.google.com/product/gemini.
DeleteMe
2. Next to **Gemini Apps Activity**, click **Turn off** (or **Turn off and delete activity**).
DeleteMe

Option 3: Turn Off Built-In AI Controls in Firefox Browser

If you are asking about stopping **Firefox** itself from running built-in AI features:

1. Click the **Menu button (three horizontal lines)** in the top-right corner of Firefox and select **Settings**.
2. Select **AI Controls** on the left menu.

3. Toggle on **Block AI enhancements** (or turn off individual AI integrations).

yes. switch off google learning

How to Turn Off Google Learning & Model Training

First, a quick note about your new account: **Google Workspace core customer data (Gmail, Drive, Docs) is NOT used to train public Google AI models by default.**

Google Workspace Updates

However, if you want to turn off AI features completely, prevent web interaction logging, or manage admin-level AI toggles, follow these steps:

1. Turn Off Gemini Web & Chat Activity Logging

This prevents Google from storing your prompt history or using standalone web interactions for model training:

1. Go to myactivity.google.com/product/gemini in Firefox.
2. Click **Turn off** (or **Turn off and delete activity**) next to **Gemini Apps Activity**.
Cloaked

2. Turn Off Smart Features & Personalization (Inside Gmail)

This stops Google from scanning your Workspace emails/docs for smart completion, auto-categorization, or cross-product predictions:

1. Open **Gmail** in Firefox.
2. Click the **Gear icon (Settings)** at the top right → **See all settings**.
3. Under the **General** tab, scroll down to **Smart features and personalization**.
Cloaked
4. **Uncheck** the box to turn off smart assistance.
5. Click **Save Changes** at the bottom of the page.

3. Fully Disable AI Apps for Your Workspace Domain (*If you are the Admin*)

If you created this Workspace account and have access to the Admin Console, you can disable generative AI features across your entire domain:

1. Go to admin.google.com.
2. In the left menu, go to **Generative AI** → **Gemini for Google Workspace**.
Google
3. Change **Service status** to **OFF**.

4. Turn Off Google Web Activity & History

To prevent general Google Search and Web activity from influencing personalized algorithms:

1. Go to myaccount.google.com/data-and-privacy.
Cloaked
2. Under **History settings**, select **Web & App Activity**.
3. Click **Turn off**.
